This project seeks to enhance a wetland area within St Peter College in association with Ngati Haua Mahi Trust.

This is an area of approximately 0.6 hectares within the St Peters College Cambridge catchment. The primary objective is to restore and protect the health and wellbeing of the Waikato River in association with the Ngāti Hauā Mahi Trust (NHMT). This area in particular is significant to Ngāti Hauā. Autahi Pā once existed around this area which was known for inhabiting large maara kai, and the tributary in which this wetland system filters into was a traditional kai and rongoā gathering resource for Ngāti Hauā rohe.
