

Whakapipi and Tuataenui riparian restoration

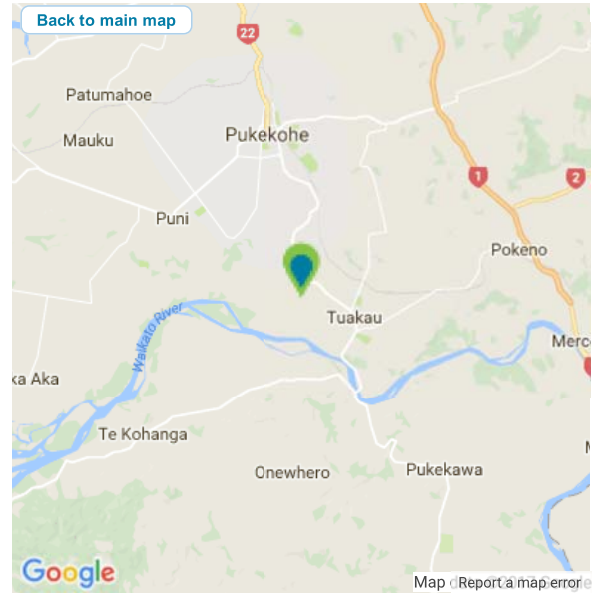

Restore riparian habitat on land parcels in the same ownership within the Whakapipi and Tuataenui Rivers in Pukekohe. There is also a land parcel on the true right bank of the lower Waikato that is part of the proposal.

These are significant tributaries of the Waikato River and are spring fed from the Kawa Aquifer under Pukekohe Hill. The streams have been degraded over time by a combination of urban and rural land use developments. Riparian planting would improve ecosystem health outcomes through shading and habitat improvements.

This project received funding from the Waikato River Authority (WRA 16-032).
