For a baseline load, assume loads of 50 kg N/ha & 3 kg P/ha for a dairy farm, both coming from OVERSEER.

Then, assume we have a list of mitigated scenarios that affect profit & the baseline constraint loads. Overseer was used to assess the effect that these mitigations would have on N+P.

	N	P	EC	soil
profit	50	3	-	-
mitigated	40	3	-	-
e.g. stubble pd
